## Important Information

### UPS Developer Kit APIs

Your development of an application using UPS Developer Kit APIs is governed by the UPS Technology Agreement you entered into with UPS. The following are key legal requirements from these agreements for the UPS Developer Kit APIs. For more information on all requirements for the UPS Developer Kit APIs, please refer to the UPS Technology Agreement.

Defined terms used but not defined in this document have the meaning set forth in the UPS Technology Agreement.

### Key Legal Requirements for UPS Developer APIs

#### *Permitted Territories*

This document can only be used in the countries of the Permitted Territory as defined in the UPS Technology Agreement, as applicable.

#### *Use*

The application must not be designed to allow distribution of information received through the UPS Developer Kit APIs to third parties, other than to persons having a bona fide interest in such information (e.g., the shipper, receiver, or the third party payer, or to your service providers authorized by UPS).

#### *Consent to Use of UPS Mark*

- All screens or forms generated by your application including information received through the UPS Developer Kit APIs must include (1) the UPS Mark positioned in reasonable proximity to the Information and of an appropriate size to readily identify the source of the Information as UPS and (2) the following language at the bottom of every screen that displays the UPS Mark: "UPS, the UPS brand mark, and the Color Brown are trademarks of United Parcel Service of America, Inc. All Rights Reserved." Except as set forth in the preceding sentence, you have no right to use the UPS Mark without the prior written approval of UPS.
- You shall not use the UPS Mark in association with any third party trademarks in a manner that might suggest co-branding or otherwise create potential confusion as to source or sponsorship of the application, or ownership of the UPS Mark.
- The UPS Mark shall be used only as provided by UPS electronically or in hard copy form. The UPS Mark may not be altered in any manner, including proportions, colors, elements, etc., or animated, morphed or otherwise distorted in perspective or dimensional appearance.
- The UPS Mark may not be combined with any other symbols, including words, logos, icons, graphics, photos, slogans, numbers, or other design elements. A minimum amount of empty space must surround the UPS Mark separating it from any other object, such as type, photography, borders, edges, etc. The required area of empty space around the UPS Mark must be  $1/3x$ , where  $x$  equals the height of the UPS Mark.

#### *Copyright and Proprietary Notice*

In your application and any POD Letters you prepare, you must include a prominent reproduction of UPS's copyright and proprietary notices in a form and format specified by UPS (See the [Copyright](#) section of this document).

#### *Display of Information*

The application must not display information concerning any other provider of shipping services or such other shipping services on any page, whether comprising one or more frames, displaying information your application receives from the UPS Developer Kit APIs. Your application must present all data within each field received through the UPS Developer Kit APIs without amendment, deletion, or modification of any type.

## **Notice**

In all communications with UPS concerning this document, please refer to the document date located on the cover.

# Chapter 1: Introduction

---

In this document, you will find guidance and instructions for integrating the Shipping Package Web Service into your application, service, or system.

## In this guide, you will find:

- New release features
- Shipping Package Web Service API functionality and business rules
- Web service API request and response schema
- FAQs for the Shipping API
- Shipping error response code descriptions
- Service code references

## This guide applies to the following API:

- SOAP API for the Shipping Package Web Service

## This guide does not apply to the following APIs:

- Shipping Package XML API
- Shipping Ground Freight or Air Freight API

## Intended Audience

This guide is intended for developers who will be integrating the Shipping Package Web Service API into their application, service, or system.

## Required Knowledge & Skills

This guide assumes you have a basic understanding of the following:

- Concepts and instructions in the *Introduction to the UPS Developer Kit* guide.
- XML syntax and structure
- Web services
- Software development

## How to Use this Guide

- If this is your first time working with the UPS Developer Kit, begin with the *Introduction to the UPS Developer Kit* guide. This guide serves as the foundation for all API-specific developer guides.
- If you are experienced with the UPS Developer Kit but have not yet worked with the Shipping Package API, continue with [Understanding the Shipping API](#). There you will find an overview of the Shipping functionality and business rules.
- [Chapter 3: Customer Integration Environment \(CIE\)](#) contains information on UPS integration environments.
- Chapters 4-8 contain an overview of the top-level containers and elements that comprise Shipping requests and responses.
- Request and response examples are located in [Shipping Web Service API Examples](#).
- Reference tables, services codes, and error codes are located in the [Appendices](#).

## Release Features

### November 2016

#### Description

Canadian destination values revised in the Delivery Confirmation Origin-Destination Pairs topic in the Appendix.

### July 2016

#### Description

##### Expanded COD Service

- Shipment level: Russia and United Arab Emirates
- Package Level: Argentina, Brazil, Chile, Mexico

# Chapter 2: Understanding the Shipping API

---

## Business Processes and Rules

- UPS expects schema elements/tags as defined in the XPath and presented in the schema structure without spelling or structural deviations. Elements/tags that are not defined in the schema or do not conform to the schema structure will be ignored by UPS.
- To access API documentation the user must have or create a My UPS profile.
- To access testing and production sites the user must have an Access Key. To get an Access Key you must have a My UPS profile and an associated shipping account. For additional information, refer to the [UPS Developer Kit User Guide](#).
- To bill package shipments, your My UPS profile must have a UPS six digit (package shipping) account number. To add an account number to your My UPS ID for the US and CA, you must have your Invoice Level Control ID and a Plan level Control ID, UPS Account Number, Country, Amount due and date of invoice for authentication.

## Shipping Rules

- UPS Worldwide Express Freight shipments require a minimum of five labels to be printed for each pallet. The API itself will only produce one label.
- You can void a shipment from the following origin countries: US, PR and CA.
- Only the first AddressLine is printed on the ShipFrom section of the label. Address Line 1, 2 and 3 will be printed on the label for the ShipTo Address if provided in the request.
- For shipments with Ground Freight Pricing, Ground Freight Pricing's grand total can be calculated by adding NetCharge from FRSShipmentData container with ServiceOptionsCharges from ShipmentCharges container.

## Negotiated Rates

The Shipping API provides access to Published Rates and Negotiated Rates. A negotiated rate is established by contract between the customer and UPS.

If you have a pricing contract with UPS, please contact your sales representative for proper setup.

Once your UPS sales rep has verified your setup you need to do the following:

1. Add your account to your My UPS profile using one of your most recent three invoices.
  - If you have never generated an invoice or have not generated an invoice in the past 90 days, add the account using the pickup location postal code for the account.
  - Because you have not generated an invoice, you will need to contact your sales representative a second time to enable negotiated rates in UPS systems.
2. When transacting with UPS API servers include the correct My UPS ID/PW + Account + Access Key.
3. Include the 'NegotiatedRatesIndicator' element within your XML request. The element is an empty tag.

### IMPORTANT NOTES:

- ▲ Negotiated rates in the CIE are for test purposes only and are not representative of actual negotiated rates. A 1% discount is applied when requested.
- ▲ Post-shipment charges, such as address corrections, dimensional weight adjustments, and other adjustments will affect the actual rate billed which may differ from the rates returned by the Shipping API.
- ▲ Make sure that all requests are identical when comparing shipping charges between applications and APIs that provide UPS Negotiated Rates.
- ▲ Working through discrepancies requires knowledge of all parameters posted, defaults, numeric rounding, and the rate table used by the applications being compared.

You can check your results against the UPS Calculate Time and Cost program: <https://wwwapps.ups.com/ctc>

## What Shipping Services Can Do

The Shipping Package API makes UPS shipping services available to client applications that communicate with UPS using the Internet. With this API, applications can prepare or schedule package shipments, manage returns, or cancel previously scheduled shipments.

### Shipments

The Shipping Package API gives your applications many ways to manage the shipment of packages to their destination. UPS offers a range of delivery time frames from same day to standard ground transportation. Shipments may be within the United States or international, and they may range from documents to large packages.

UPS also supports many valued added services for shipments, including collect on delivery (COD), declared value, delivery confirmation, and automatic notification of delivery status.

For full details on all UPS shipping services, please consult the latest *UPS Rate and Service Guide* available at <http://www.ups.com>.

NOTE: Shipments are sometimes called forward shipments or outbound shipments to distinguish them from returns.

### VOIDS (Cancellations)

If you need to void/cancel a previously scheduled shipment, the UPS Void API can be used to void the shipment.

### Returns

The Shipping Package API also supports UPS return services. With return services, you can:

- Include a label in an outbound shipment
- Ask UPS to email or mail the return label to your customer
- Request a UPS driver to pick up the package at the your customer's location

NOTE: UPS can provide a label for a return shipment even if it did not provide a label for the forward shipment.

## How Shipping Services Work

Because forward and return shipments share many of the same characteristics (they have an origin, destination, service type, etc.), UPS APIs use the same procedure for both services. Canceling or voiding a shipment requires its own procedure.

### Two-Stage Shipping Process

The process to use the Shipping API consists of two stages, the ship confirm stage followed by the ship accept stage. A request/response pair is exchanged between the client and server in each stage.

#### Stage I. Confirm

##### 1. ShipConfirmRequest

The procedure begins when a client application sends a (1) ShipConfirmRequest to UPS. This request provides details of the Ship and the desired UPS services.

- After the ShipConfirmRequest message is created, it must be sent to the Shipping API ShipConfirm URL address, using a HTTP POST.

##### 2. ShipConfirmResponse

- After the ShipConfirmRequest message is received by the server, it is preprocessed and validated. If the request passes all validation tests, a (2) ShipConfirmResponse is returned containing estimated rate information, the Ship Id, and the Ship digest.
- If the ShipConfirmRequest message fails validation, a ShipConfirmResponse message is returned containing error information. The majority of the validation is performed in this stage. *The actual Ship has not been created at this point.*

#### Stage II. Accept

##### 3. ShipAcceptRequest

When the rates and services are accepted by the client, a (3) ShipAcceptRequest is sent to UPS. This message authorizes UPS to charge for the Ship and process the Ship data.

- In order to create a Ship and receive the shipping label(s), a ShipAcceptRequest message must be created and sent to the Shipping API ShipAccept connection address URL, using a HTTP POST.
- The ShipAcceptRequest message must contain the Ship digest returned in the ShipConfirmResponse message.

##### 4. ShipAcceptResponse

UPS acknowledges the request by returning a (4) ShipAcceptResponse. For forward Ships and for preprinted return labels, this response includes a label for the Ship.

- After the ShipAcceptRequest message is received in the server, additional processing validation is performed. If the ShipAcceptRequest message passes all validation tests, a ShipAcceptResponse message is returned containing detailed rate information, the Ship ID, package tracking numbers and the shipping label(s).
- If the ShipAcceptRequest message fails validation, a ShipAcceptResponse message is returned containing error information.

## Preprinted Labels

Clients that want to include preprinted labels as part of forward Ships must perform this four-step procedure twice. One time processes the forward Ship, and the second time retrieves the return label.

## Single Stage Process

In addition to the two-stage process the previous subsection describes, client applications may process a forward or return shipment with a single request and response. With this process, clients will not have the opportunity to review estimated rates before accepting the shipment. As the figure below illustrates, clients invoke this process by sending a (1) ShipmentRequest, to which UPS replies with a (2) ShipmentResponse.

 **NOTE:** Estimated rates are not available when using the single stage process.

## Voiding Shipments

To void a previously scheduled shipment, the client applications send a (1) VoidShipmentRequest to UPS. As the figure below illustrates, UPS replies to the request with a (2) VoidShipmentResponse.

Applications may void forward shipments up to 28 days after initially processing them. Return shipments can be voided until 2 a.m. Eastern Time the following night.

## Label Recovery Services

For up to 30 days after customers schedule return shipments, UPS maintains a copy of the shipping labels for the returned package. If customers need to print additional copies of return labels, the Label Recovery Shipping API can retrieve those labels.

Merchants typically provide this functionality on their own web site. Their customers access the merchant's web site, which acts as an intermediary on their behalf to retrieve the label from UPS.

## Chapter 3: Customer Integration Environment (CIE)

---

The Customer Integration Environment allows customers to test their application prior to launch. This environment is intended for integration testing of customer applications with the UPS servers.

Once your application has been thoroughly tested, you should redirect the application to the UPS Production Environment.

No stress testing should ever be performed by customers against any UPS systems.

To access testing and production sites the user must have an Access Key. You can request an Access Key after establishing a UPS profile and associating your shipping account.

Test your Rate and Shipping selections using valid and invalid data elements including postal codes, weights, and package types. This will ensure that your application has the ability to process success and error responses correctly.

Verify that your XML can produce the following:

- Void Request
- High Value Report
- Label Recovery
- A proportional UPS Address label

Behavior of the Shipping API in CIE mode is as follows:

- Shipments created in CIE mode would have “Sample” watermark across the barcode in labels.
- All international forms in CIE mode would have “Sample” watermark across the forms.
- All credit cards are checked for the right format but the credit cards are not authorized in CIE mode.
- All other functionality is similar to production mode.

### System Availability

The Customer Integration Environment is available 24 hours a day, 7 days a week. Note, the system is occasionally down for server maintenance.

### Using Negotiated Rates in CIE

Negotiated rates are available in the UPS Customer Integration Environment (CIE) and are returned when the Negotiated Rate indicator is provided in the ship request.

- The negotiated rates returned do not reflect the contractual rate and may vary. Typically, they are 1% off the published rate.
- Also in the Customer Integration Environment, the shipper eligibility for negotiated rates is not fully verified.
- Negotiated Itemized Charges for UPS Worldwide Express Freight are not returned in CIE.
- 1% of tax charges and total charges with taxes are returned as negotiated rates in CIE mode if the TaxInformationIndicator is present in the request and if taxes are applicable.

## Shipping

### Shipping Integration Testing

For integration testing, direct your Shipping Package Web Service to:

<https://wwwcie.ups.com/webservices/Ship>

### Shipping Production URL

Once your testing is complete, direct your Shipping Package Web Service to the production URL:

<https://onlinetools.ups.com/webservices/Ship>

### Server Availability Check for Shipping

All of the UPS services work using HTTPS POST. If the server is available, it will reply with the service name, remote user, server port, server name, and servlet path.

To see this in action, type the following URL in your web browser:

<https://wwwcie.ups.com/webservices/Ship>

<b>Service Name:</b>	ShipWS
<b>Remote User:</b>	null
<b>Server Port:</b>	443
<b>Server Name:</b>	wwwcie.ups.com
<b>Servlet Path:</b>	/Ship

## Void Package

### Void Package Integration Testing

Testing your Void application will ensure that your application has the ability to process success and error responses correctly.

For integration testing, direct your Void Package Shipment Web Service to:

<https://wwwcie.ups.com/webservices/Void>

Test your Void application using the set of 1Zs listed below:

### Void Package Production URL

Once testing is complete, direct your Void Package Web Service API to the production URL:

<https://onlinetools.ups.com/webservices/Void>

### Server Availability Check for Void

All of the UPS services work using HTTPS POST. If the server is available, it will reply with the service name, remote user, server port, server name, and servlet path.

To see this in action, type the following URL in your web browser:

<https://wwwcie.ups.com/webservices/Void>

<b>Server Name:</b>	Void
<b>Remote User:</b>	null
<b>Server Port:</b>	443
<b>Server Name:</b>	wwwcie.ups.com
<b>Servlet Path:</b>	/Void

## Shipping and Tracking Numbers for Testing Void

UPS has set aside several shipping identification and tracking numbers to help developers test their applications. These special numbers are only valid in the Customer Integration Environment at [www.cie.ups.com](http://www.cie.ups.com).

The following table lists those special numbers and describes the results that developers should expect when attempting a `VoidShipmentRequest`. For each test case, the first number listed is a shipment identification number; additional numbers, if present, are tracking numbers.

Note that only these numbers may be used in the Customer Integration Environment when voiding shipments.

NUMBER(S)	EXPECTED RESULT
1ZISDE016691676846	A successful XML response will be returned for a shipment level void request.
1Z2220060290602143	A successful XML response will be returned for a shipment level void request.
1Z2220060294314162 and Tracking Number 1Z2220060291994175	A successful XML response will be returned for a package level void request. The request will void the package in the shipment.
1Z2220060292690189 and Tracking Number 1Z2220060292002190	A successful XML response will be returned for a package level void request. The request will void the package in the shipment.
1ZISDE016691609089 with Tracking Numbers 1ZISDE016694068891 and 1ZISDE016690889305	A successful XML response will be returned for a package level void request. The request will void all the packages
1Z2220060290530202 with Tracking Number 1Z2220060293874210 and 1Z2220060292634221	A successful XML response will be returned with a partial void for a package level void request. The request will void package 1Z2220060293874210 but package 1Z2220060292634221 cannot be voided.

## Label Recovery

To ensure that your application has the ability to process PDF and html responses correctly test your Label Recovery application using a set similar to 1Zs listed below:

NUMBER(S)	SCENARIO	EXPECTED RESULT
1Z12345E8791315509	Label returned in PDF format	Request is processed, label returned in PDF format
1Z12345E8791315413	Label returned in html format	Request is processed, label returned in html format

### Label Recovery Integration Testing

For integration testing, direct your Label Recovery Web Service to:

<https://wwwcie.ups.com/webservices/LBRecovery>

### Label Recovery Production URL

Once testing is complete, direct your Label Recovery Web Service to:

<https://onlinetools.ups.com/webservices/LBRecovery>

### Server Availability Check for Label Recovery

All of the UPS services work using HTTPS POST. If the server is available, it will reply with the service name, remote user, server port, server name, and servlet path.

To see this in action, type the following URL in your web browser:

<https://wwwcie.ups.com/webservices/LBRecovery>

<b>Server Name:</b>	LBRecovery
<b>Remote User:</b>	null
<b>Server Port:</b>	443
<b>Server Name:</b>	wwwcie.ups.com
<b>Servlet Path:</b>	/LBRecovery

## Chapter 4: Shipment API Elements and Details

---

### Accessing the Shipping Package Web Service API

<b>Service Operations:</b>	Shipment, ShipConfirm, ShipAccept
<b>Type:</b>	Type: Request-Response (client sends a request to UPS, and the UPS server replies with a response)
<b>SOAPAction Header:</b>	<a href="https://wwwcie.ups.com/webservices/Ship">https://wwwcie.ups.com/webservices/Ship</a>

### Element Constraints

The Request and Response XPath tables contain the full hierarchy of the API elements.

-  UPS expects schema elements/tags as defined in the XPath and presented in the schema structure i.e., no spelling or structural deviations. Elements/tags that are not defined in the schema or do not conform to the schema structure will be ignored by UPS.

Element constraints are defined as follows:

#### Required

- Yes - indicates the element must be present in the request or response.
- Yes\* - indicates the element must be present in the request if the parent container is present in the request.
- No - indicates the element is optional and may be used if it applies to the request .
- Cond – indicates the element is required under certain conditions.

#### Type

- Container - holds a group of related elements.
- String - consists of alphanumeric characters, spaces, and decimals.

#### Length

- The maximum number of characters that can be present in a String. Length is not applicable (N/A) to Containers.

#### Max Allowed

- The maximum number of elements or containers that can be present in the parent container.

## ShipmentRequest Top Level Containers

## ShipmentRequest XPath Tables

Note: Not all containers/elements are reflected separately in the table of contents.

Name	Constraint	Description	Validation
<a href="#">/ShipmentRequest</a>			
ShipmentRequest	Required: Yes Type: Container Max Allowed: 1 Length: N/A	Shipment Request.	

### Request

Name	Constraint	Description	Validation
<a href="#">/ShipmentRequest/Request</a>			
Request	Required: Yes Type: Container Max Allowed: 1 Length: N/A	Request Container	

### RequestOption

Name	Constraint	Description	Validation
<a href="#">/ShipmentRequest/Request/RequestOption</a>			
RequestOption	Required: Yes Type: String Max Allowed: 1 Length: 1...15	<p>Optional Processing.</p> <ul style="list-style-type: none"> <li>• nonvalidate = No street level address validation would be performed, but Postal Code/State combination validation would still be performed.</li> <li>• validate = No street level address validation would be performed, but City/State/Postal Code/ combination validation would still be performed.</li> </ul> <p>Note: Full address validation is not performed. Therefore, it is the responsibility of the Shipping Tool User to ensure the address entered is correct to avoid an address correction fee.</p>	Valid values are validate and nonvalidate.

## SubVersion

Name	Constraint	Description	Validation
<a href="#">/ShipmentRequest/Request/SubVersion</a>			
SubVersion	Required: No Type: String Max Allowed: 1 Length: 4	Indicates the Ship API to display the new release features in the Ship API response based on Ship release.  See the Release Features section for the latest supported version.  Supported values: 1601, 1607  Format: YYMM = Year and month of the release.	

## TransactionReference

Name	Constraint	Description	Validation
<a href="#">/ShipmentRequest/Request/TransactionReference</a>			
TransactionReference	Required: No Type: Container Max Allowed: 1 Length: N/A	TransactionReference identifies transactions between client and server.	
<a href="#">/ShipmentRequest/Request/TransactionReference/CustomerContext</a>			
CustomerContext	Required: No Type: String Max Allowed: 1 Length: 1...512	The client uses CustomerContext to synchronize request/response pairs.  The client establishes CustomerContext, which can contain any information client want, as long as it is valid XML; it is echoed back by the server.	

## Shipment

Name	Constraint	Description	Validation
<a href="#">/ShipmentRequest/Shipment</a>			
Shipment	Required: Yes Type: Container Max Allowed: 1 Length: N/A	Shipment Container	

## Description

Name	Constraint	Description	Validation
<a href="#">/ShipmentRequest/Shipment/Description</a>			
Description	Required: Cond Type: String Max Allowed: 1 Length: 1...35	<p>The Description of Goods for the shipment. Applies to international and domestic shipments.</p> <p>Provide a detailed description of items being shipped for documents and non-documents.</p> <p>Provide specific descriptions, such as "annual reports" and "9 mm steel screws".</p>	<p>Required if all of the listed conditions are true:</p> <p>ShipFrom and ShipTo countries are not the same;</p> <p>The packaging type is not UPS Letter;</p> <p>The ShipFrom and or ShipTo countries are not in the European Union or the ShipFrom and ShipTo countries are both in the European Union and the shipments service type is not UPS Standard.</p>

## ReturnService

Name	Constraint	Description	Validation
<a href="#">/ShipmentRequest/Shipment/ReturnService</a>			
ReturnService	Required: No Type: Container Max Allowed: 1 Length: N/A	Type of Return service. When this container exists, the shipment is a return shipment.	

Name	Constraint	Description	Validation
<a href="#">/ShipmentRequest/Shipment/ReturnService/Code</a>			
Code	Required: Yes* Type: String Max Allowed: 1 Length: 1...2	Return Service types: 2 = UPS Print and Mail (PNM) 3 = UPS Return Service 1-Attempt (RS1) 5 = UPS Return Service 3-Attempt (RS3) 8 = UPS Electronic Return Label (ERL) 9 = UPS Print Return Label (PRL) 10 = UPS Exchange Print Return Label, 11 = UPS Pack & Collect Service 1-Attempt Box 1 12 = UPS Pack & Collect Service 1-Attempt Box 2 13 = UPS Pack & Collect Service 1-Attempt Box 3 14 = UPS Pack & Collect Service 1-Attempt Box 4 15 = UPS Pack & Collect Service 1-Attempt Box 5 16 = UPS Pack & Collect Service 3-Attempt Box 1 17 = UPS Pack & Collect Service 3-Attempt Box 2 18 = UPS Pack & Collect Service 3-Attempt Box 3 19 = UPS Pack & Collect Service 3-Attempt Box 4 20 = UPS Pack & Collect Service 3-Attempt Box 5	
<a href="#">/ShipmentRequest/Shipment/ReturnService/Description</a>			
Description	Required: No Type: String Max Allowed: 1 Length: 1...35	Return Service description	

## DocumentsOnlyIndicator

Name	Constraint	Description	Validation
<a href="#">/ShipmentRequest/Shipment/DocumentsOnlyIndicator</a>			
DocumentsOnlyIndicator	Required: No Type: String Max Allowed: 1 Length: 0	Indicates a shipment contains written, typed, or printed communication of no commercial value.  If DocumentsOnly is not specified then it implies that the shipment contains non documents or documents of commercial value.  Default is a shipment contains non- documents or documents of commercial value.	Empty Tag. Valid only for shipments with different origin and destination countries.  The origin country is not US, and the destination country is not CA, PR or MX.

## Shipper

Name	Constraint	Description	Validation
<a href="#">/ShipmentRequest/Shipment/Shipper</a>			
Shipper	Required: Yes Type: Container Max Allowed: 1 Length: N/A	Container tag for Shipper's information	
<a href="#">/ShipmentRequest/Shipment/Shipper/Name</a>			
Name	Required: Yes Type: String Max Allowed: 1 Length: 1...35	Shipper's company name. For forward Shipment 35 characters are accepted, but only 30 characters will be printed on the label.	
<a href="#">/ShipmentRequest/Shipment/Shipper/AttentionName</a>			
AttentionName	Required: Cond Type: String Max Allowed: 1 Length: 1...35	Shipper's Attention Name. For forward Shipment 35 characters are accepted, but only 30 characters will be printed on the label.	Required if destination is international. Required if Invoice and CO International forms are requested and the ShipFrom address is not present.

Name	Constraint	Description	Validation
<a href="#">/ShipmentRequest/Shipment/Shipper/CompanyDisplayableName</a>			
CompanyDisplayableName	Required: No Type: String Max Allowed: 1 Length: 1..35	Shipper's CompanyDisplayableName	This is available for Shipper accounts enabled by UPS and applies to Forward Shipments.  The CompanyDisplayableName will be displayed in tracking results and notification messages in place of the name associated with the shipper account.  The original shipper account name will be displayed for all Return Services and Import Control Shipments.
<a href="#">/ShipmentRequest/Shipment/Shipper/TaxIdentificationNumber</a>			
TaxIdentificationNumber	Required: Cond Type: String Max Allowed: 1 Length: 1...15	Shipper's Tax Identification Number	Conditionally required if EEI form (International forms) is requested and ship From is not mentioned.
<a href="#">/ShipmentRequest/Shipment/Shipper/Phone</a>			
Phone	Required: Cond Type: Container Max Allowed: 1 Length: N/A	Container tag for Phone Number	
<a href="#">/ShipmentRequest/Shipment/Shipper/Phone/Number</a>			
Number	Required: Yes* Type: String Max Allowed: 1 Length: 1...15	Shipper's phone Number.	Valid values are 0 - 9.  If Shipper country is US, PR, CA, and VI, the layout is area code, 7 digit PhoneNumber or area code, 7 digit PhoneNumber, 4 digit extension number.  Other countries, the layout is CountryCode, area code, 7 digit number.  A phone number is required if destination is international.
<a href="#">/ShipmentRequest/Shipment/Shipper/Phone/Extension</a>			
Extension	Required: No Type: String Max Allowed: 1 Length: 1...4	Shipper's phone extension.	

Name	Constraint	Description	Validation
<a href="#">/ShipmentRequest/Shipment/Shipper/ShipperNumber</a>			
ShipperNumber	Required: Yes Type: String Max Allowed: 1 Length: 6	Shipper's six digit account number.	Size must be six alphanumeric characters.  Must be associated with the UserId specified in the AccessRequest XML. The account must be a valid UPS account number that is active.  For US, PR and CA accounts, the account must be either a daily pickup account, an occasional account, or a customer B.I.N account.  Drop Shipper accounts are valid for return service shipments only if the account is Trade Direct (TD) enabled.  All other accounts must be either a daily pickup account or an occasional account.
<a href="#">/ShipmentRequest/Shipment/Shipper/FaxNumber</a>			
FaxNumber	Required: No Type: String Max Allowed: 1 Length: 1...14	Shipper's Fax Number.	
<a href="#">/ShipmentRequest/Shipment/Shipper/EMailAddress</a>			
EMailAddress	Required: No Type: String Max Allowed: 1 Length: 1...50	Shipper's email address.	
<a href="#">/ShipmentRequest/Shipment/Shipper/Address</a>			
Address	Required: Yes Type: Container Max Allowed: 1 Length: N/A	Address tag Container.	The package should be returned to this address if the package is undeliverable. This address appears on the upper left hand corner of the label.  Note: If the ShipFrom container is not present then this address will be used as the ShipFrom address. If this address is used as the ShipFrom the shipment will be rated from this origin address.

Name	Constraint	Description	Validation
<a href="#">/ShipmentRequest/Shipment/Shipper/Address/AddressLine</a>			
AddressLine	Required: Yes Type: String Max Allowed:3 Length: 1...35	The Shipper street address including name and number (when applicable).  Up to three occurrences are allowed; only the first is printed on the label.  35 characters are accepted, but for the first occurrence, only 30 characters will be printed on the label for return shipments.	Maximum Occurrence should be three.
<a href="#">/ShipmentRequest/Shipment/Shipper/Address/City</a>			
City	Required: Yes Type: String Max Allowed: 1 Length: 1...30	The shipper's City.  For forward Shipment 30 characters are accepted, but only 15 characters will be printed on the label.	
<a href="#">/ShipmentRequest/Shipment/Shipper/Address/StateProvinceCode</a>			
StateProvinceCode	Required: Cond Type: String Max Allowed: 1 Length: 2...5	Shipper's state or province code.  For forward Shipment 5 characters are accepted, but only 2 characters will be printed on the label.	Required if shipper is in the US or CA.  If Shipper country is US or CA, then the value must be a valid US State/ Canadian Province code.  If the country is Ireland, the StateProvinceCode will contain the county.
<a href="#">/ShipmentRequest/Shipment/Shipper/Address/PostalCode</a>			
PostalCode	Required: Cond Type: String Max Allowed: 1 Length: 1...9	Shipper's postal code.	If Shipper country is US or Puerto Rico, 5 or 9 digits are required. .  The character - may be used to separate the first five digits and the last four digits.  If the Shipper country is CA, then the postal code is required and must be 6 alphanumeric characters whose format is A#A#A# where A is an uppercase letter and # is a digit.  For all other countries the postal code is optional and must be no more than 9 alphanumeric characters long.

Name	Constraint	Description	Validation
<a href="#">/ShipmentRequest/Shipment/Shipper/Address/CountryCode</a>			
CountryCode	Required: Yes Type: String Max Allowed: 1 Length: 2	Shipper's country code. Refer to Origin Country Information table for valid origin countries and their UPS Billing codes.	Must be a valid UPS Billing country code. For Forward shipments it must also be an allowable UPS origin country. For Return Shipment the country code must meet the following conditions:  1) At least two of the following country codes are the same: ShipTo, ShipFrom, and Shipper.  2) None of the following country codes are the same and are a member of the EU: ShipTo, ShipFrom, and Shipper.  3) If any of the two following country codes: ShipTo/ ShipFrom/ Shipper are members in EU otherwise check if the shipper has Third Country Contract.

## ShipTo

Name	Constraint	Description	Validation
<a href="#">/ShipmentRequest/Shipment/ShipTo</a>			
ShipTo	Required: Yes Type: Container Max Allowed: 1 Length: N/A	Ship To Container	
<a href="#">/ShipmentRequest/Shipment/ShipTo/Name</a>			
Name	Required: Yes Type: String Max Allowed: 1 Length: 1...35	Consignee's company name.	
<a href="#">/ShipmentRequest/Shipment/ShipTo/AttentionName</a>			
AttentionName	Required: Cond Type: String Max Allowed: 1 Length: 1...35	Contact name at the consignee's location.	Required for: UPS Next Day Air® Early service, and when ShipTo country is different than ShipFrom country. Required if Invoice International form is requested

Name	Constraint	Description	Validation
<a href="#">/ShipmentRequest/Shipment/ShipTo/CompanyDisplayableName</a>			
CompanyDisplayableName	Required: No Type: String Max Allowed: 1 Length: 1..35	Not applicable for ShipTo	
<a href="#">/ShipmentRequest/Shipment/ShipTo/TaxIdentificationNumber</a>			
TaxIdentificationNumber	Required: No Type: String Max Allowed: 1 Length: 1...15	Consignee's tax identification number.	
<a href="#">/ShipmentRequest/Shipment/ShipTo/Phone</a>			
Phone	Required: Cond Type: Container Max Allowed: 1 Length: N/A	Container for Phone Number	
<a href="#">/ShipmentRequest/Shipment/ShipTo/Phone/Number</a>			
Number	Required: Yes* Type: String Max Allowed: 1 Length: 1...15	Consignee's phone Number.	Required for:UPS Next Day Air® Early service, and when Ship To country is different than the ShipFrom country.  If ShipTo country is US, PR, CA, and VI, the layout is area code, 7 digit PhoneNumber or area code, 7 digit PhoneNumber, 4 digit extension number; number.  Other countries, the layout is CountryCode, area code, 7 digit number.
<a href="#">/ShipmentRequest/Shipment/ShipTo/Phone/Extension</a>			
Extension	Required: No Type: String Max Allowed: 1 Length: 1...4	Consignee's phone extension.	
<a href="#">/ShipmentRequest/Shipment/ShipTo/FaxNumber</a>			
FaxNumber	Required: No Type: String Max Allowed: 1 Length: 1...15	Consignee's fax number.	If ShipTo country is US 10 digits allowed, otherwise 1-15 digits allowed.

Name	Constraint	Description	Validation
<a href="#">/ShipmentRequest/Shipment/ShipTo/EmailAddress</a>			
EmailAddress	Required: No Type: String Max Allowed: 1 Length: 1...50	Consignee's email address.	
<a href="#">/ShipmentRequest/Shipment/ShipTo/Address</a>			
Address	Required: Yes Type: Container Max Allowed: 1 Length: N/A	Address Container.	
<a href="#">/ShipmentRequest/Shipment/ShipTo/Address/AddressLine</a>			
AddressLine	Required: Yes Type: String Max Allowed:3 Length: 1...35	Address Line of the consignee.	Max occurrence: 3
<a href="#">/ShipmentRequest/Shipment/ShipTo/Address/City</a>			
City	Required: Yes Type: String Max Allowed: 1 Length: 1...30	Consignee's city. 30 characters are accepted, but only 15 characters will be printed on the label.	
<a href="#">/ShipmentRequest/Shipment/ShipTo/Address/StateProvinceCode</a>

MonetaryValue	Required: Yes* Type: String Max Allowed: 1 Length: 1...19	Net charges monetary value.	Valid values are from 0 to 9999999999999999.99

## FreightDensityRate

Name	Constraint	Description	Validation
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/FreightDensityRate</a>			
FreightDensityRate	Required: No Type: Container Max Allowed: 1 Length: N/A	FreightDensityRate container for Density based rating.	

Name	Constraint	Description	Validation
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/FreightDensityRate/Density</a>			
Density	Required: Yes* Type: String Max Allowed: 1 Length: 1...5	Density is returned if the Shipper is eligible for Density based rate. Valid values are 0 to 999.9	
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/FreightDensityRate/TotalCubicFeet</a>			
TotalCubicFeet	Required: Yes* Type: String Max Allowed: 1 Length: 1...9	TotalCubic feet is returned if the Shipper is eligible for Density based rate. Valid values are 0 to 99999.999	

## HandlingUnits

Name	Constraints	Description	Validation
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/HandlingUnits</a>			
HandlingUnits	Required: Cond Type: Container Max Allowed: 50 Length: N/A	Handling Unit for Density based rating container.	
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/HandlingUnits/Quantity</a>			
Quantity	Required: Yes* Type: String Max Allowed: 1 Length: 8	Handling Unit Quantity for Density based rating.	
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/HandlingUnits/Type</a>			
Type	Required: Yes* Type: Container Max Allowed: 1 Length: N/A	Handling Unit Type for Density based rating.	

Name	Constraints	Description	Validation
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/HandlingUnits/Type/Code</a>			
Code	Required: Yes* Type: String Max Allowed: 1 Length: 3	The code associated with Handling Unit Type.	Valid values: SKD = Skid CBY = Carboy PLT = Pallet TOT = Totes LOO = Loose OTH = Other
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/HandlingUnits/Type/Description</a>			
Description	Required: No Type: String Max Allowed: 1 Length: 1...35	A description of the code for the Handling Unit type.	
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/HandlingUnits/Dimensions</a>			
Dimensions	Required: Yes* Type: Container Max Allowed: 1 Length: N/A	Dimension of the HandlingUnit container for density based pricing.	
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/HandlingUnits/Dimensions/UnitOfMeasurement</a>			
UnitOfMeasurement	Required: Yes* Type: Container Max Allowed: 1 Length: N/A	UnitOfMeasurement container.	
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/HandlingUnits/Dimensions/UnitOfMeasurement/Code</a>			
Code	Required: Yes* Type: String Max Allowed: 1 Length: 3	Code for UnitOfMeasurement for the line item dimension.  Valid value: IN = Inches	
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/HandlingUnits/Dimensions/UnitOfMeasurement/Description</a>			
Description	Required: No Type: String Max Allowed: 1 Length: 1...35	Description for UnitOfMeasurement for the line item dimension.	

Name	Constraints	Description	Validation
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/HandlingUnits/Dimensions/Length</a>			
Length	Required: Yes* Type: String Max Allowed: 1 Length: 1...19	The length of the line item used to determine dimensional weight.	
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/HandlingUnits/Dimensions/Width</a>			
Width	Required: Yes* Type: String Max Allowed: 1 Length: 1...19	The width of the line item used to determine dimensional weight.	
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/HandlingUnits/Dimensions/Height</a>			
Height	Required: Yes* Type: String Max Allowed: 1 Length: 1...19	The height of the line item used to determine dimensional weight.	
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/HandlingUnits/AdjustedHeight</a>			
AdjustedHeight	Required: Cond Type: Container Max Allowed: 1 Length: N/A	Container to hold Adjusted Height information.	
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/HandlingUnits/AdjustedHeight/Value</a>			
Value	Required: Yes* Type: String Max Allowed: 1 Length: 1...19	Adjusted Height value for the handling unit.	Height Adjustment is done only when Handling unit type is SKD = Skid or PLT = Pallet.
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/HandlingUnits/AdjustedHeight/UnitOfMeasurement</a>			
UnitOfMeasurement	Required: Yes* Type: Container Max Allowed: 1 Length: N/A	Unit of Measurement container for the Adjusted height.	

Name	Constraints	Description	Validation
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/HandlingUnits/AdjustedHeight/UnitOfMeasurement/Code</a>			
Code	Required: Yes* Type: String Max Allowed: 1 Length: 3	Code associated with Unit of Measurement for the Adjusted height.	
<a href="#">/ShipConfirmResponse/ShipmentResults/FRSShipmentData/HandlingUnits/AdjustedHeight/UnitOfMeasurement/Description</a>			
Description	Required: No Type: String Max Allowed: 1 Length: 1...35	Description for Code associated with Unit of Measurement for the Adjusted height.	

## RatingMethod

Name	Constraint	Description	Validation
<a href="#">/ShipConfirmResponse/ShipmentResults/RatingMethod</a>			
RatingMethod	Required: Cond Type: String Max Allowed: 1 Length: 2	RatingMethod is to indicate whether the Shipment was rated as shipment level or package level. This information will be returned only if RatingMethodRequestedIndicator is present in the request.	Valid values are 01 = Shipment level, 02 = Package level.

## BillableWeightCalculationMethod

Name	Constraint	Description	Validation
<a href="#">/ShipConfirmResponse/ShipmentResults/BillableWeightCalculationMethod</a>			
BillableWeightCalculationMethod	Required: Cond Type: String Max Allowed: 1 Length: 2	BillableWeightCalculationMethod is to indicate whether the billable weight calculation method utilized was - the package level or shipment level. This information will be returned only if RatingMethodRequestedIndicator is present in the request.	Valid values are 01 = Shipment Billable Weight, 02 = Package Billable Weight.

## BillingWeight

## Chapter 7: Label Recovery API Elements and Details

Only Return Shipments support Label Recovery. The label for the return shipment can be recovered using the Tracking Number.

For up to 30 days after customers schedule return shipments, UPS maintains a copy of the shipping labels for the returned package. If customers need to print additional copies of return labels, the Label Recovery Shipping API can retrieve those labels.

Merchants typically provide this functionality on their own web site. Their customers access the merchant's web site, which acts as an intermediary on their behalf to retrieve the label from UPS.

## Chapter 10: Shipping Package API FAQs

Category	Question	Answer
99 Account Number Limitation	How do I associate more than 99 account numbers for use with the Shipping APIs?	Ninety-nine accounts is currently the maximum number available. If the user has more than ninety-nine accounts, they must be spread across multiple User IDs.
128 Reference Number Barcode	Can the Shipping Package API generate a Code 128 Reference number barcode below the 1Z? Can it generate a PDF417 Reference number barcode below the 1Z?	Yes. A Code 128 Reference number barcode can be generated below the 1Z Tracking number, as the Shipping API can print a barcode in reference field 1. The Shipping Package API does not support PDF417 barcode types.
Account Based Rates (ABR) or Negotiated Rates	Do the Developer APIs support ABR also known as Negotiated Rates?	Yes. Shipping and Rating XML and Web Service APIs support Negotiated Rates.
Address Validation	How do I turn off validation of addresses with the Shipping API?	Set the value within the "ShipmentRequest/Request/RequestOption" tag of the request to "nonvalidate".
Address Validation	Will the Shipping API provide validation for Japanese addresses with City and Country and no zip code?	No, the postal code must be included for validation.
Address Validation	What validation is the Shipping API using to validate addresses for US and International addresses?	The Shipping API does not support address validation at the street level.  The Shipping API does support regional validation of the city, state, and postal code when "validate" is specified in the "RequestOption" element. If "nonvalidate" is specified then address validation is not performed.
Batch Processing	Does the Shipping API support batch requests?	No, the Shipping API only supports transactional requests.
Certification	What is required to certify for the Shipping Package API?	UPS now grants both test and production access to the Shipping API without any further requests. There are separate URL's for both the test and production environments. For additional information, refer to <a href="#">Customer Integration Environment (CIE)</a>

Category	Question	Answer
International Commodities	How many line items can a Commercial Invoice contain?	When using international forms only 50 line items (commodities) can be associated with a shipment.
International Forms	Does the Shipping Package API support international forms?	Yes.
Label	Does the Web Service version of the Shipping Package API behave differently than the XML version when rendering a label?	<p>The Web Service and XML APIs behave similarly. The label elements returned in the Shipment Accept response consist of two parts, both of which are base64-encoded data that must be decoded.</p> <p>Part one consists of the label image and part two contains the HTML that is used to size the label image in a browser for display and printing.</p> <p>When the two parts are combined, they form a unit that will satisfy the requirements for printing a proper label to apply to a package. This ensures the label will meet the standards necessary for UPS to scan and process the label within the shipping system.</p>
Label Reference Number	Can any of the reference fields be blocked from printing on the label?	No. However, please note that reference numbers are not required and may be omitted if there is no need for them.
Label/Receipt	Does the Shipping Package API provide an e-mail version of the label, receipt, and confirmation number?	The output of the Shipping API is a label. A receipt is not provided. In addition, the Ship API only provides the ability to have the label emailed with the ERL (Electronic Return Label) service and not for forward shipments.
Labeling	Does the Shipping API support ISC BIO labels like WorldShip?	No, it is a contract service that is not supported.
Mail Innovations (MI) Shipments	Do returns display rates for Mail Innovation shipments?	Rates are not displayed for Mail Innovations shipments.
Mail Innovations Shipments	Can you void an MI shipment?	No, you cannot void a MI shipment. There is no charge for creating a label. The shipment is not charged until scanned by the UPS Driver.
Maximum Packages within a shipment	What is the maximum number of packages that can be included within a forward movement? Is this number the same for the Web Service and XML versions?	Both versions allow a maximum of two hundred packages.

Category	Question	Answer
Negotiated Rates	How do you get access to negotiated Package rates?	<p>To streamline your ability to view your negotiated rates through the Shipping/Rating API, UPS has implemented a new process that no longer requires you to wait for a UPS Sales Person to activate your account.</p> <p>Simply add a UPS Account to your My UPS ID Account Summary as you previously would and your account will be activated within 48 hours for negotiated rates (provided you have a contract with UPS).</p> <p>Remember to select the “Negotiated Rates Indicator” within the Request to have negotiated rates returned within the response.</p> <p>For additional information, refer to <a href="#">Using Negotiated Rates in CIE</a>.</p>
Negotiated Rates	What flags are needed to return Negotiated rates in the request?	The NegotiatedRatesIndicator.
Oracle	Are there any known issues with implementing Oracle with the Shipping Package API?	<p>UPS is not aware of any issues at this time.</p> <p>The UPS Developer APIs are designed so that they can be implemented in almost any environment as long as the customer application can open a secure connection of SSL and perform an HTTP Post.</p>

## Error Codes

If you get a < ShipmentResponse > in a SOAP Envelope's Body part, it means the request is processed successfully. Otherwise, a SOAP Fault will be returned in a SOAP Envelope's Body part. In a good response, check the ResponseStatusCode element. A "1" normally indicates a successful response.

When you get a SOAP FAULT, check the Errors and the sub-element ErrorDetail. The value of <Severity> can be either Transient or Hard. When an error occurs there will also be an error code, and an error description in PrimaryErrorCode element.

- Success – Successful responses may or may not include Warnings.
  - (without warnings) Request is processed as anticipated by the client.
  - (with warnings) Warning messages indicate that UPS was able to process the request; however (potentially) unanticipated results have also occurred. The warning contains information in the response that should be passed to the end user.
- Errors – will return two different levels of severity.
  - *Transient* errors are temporary errors, due to temporary high server loads or scheduled maintenance, for example. The application may re-issue the request at a later time.
  - *Hard* errors indicate that an error existed in the request that UPS could not resolve, it is a user error. These errors are critical and prevent requests from processing.

Applications should not re-issue requests with Hard errors without first correcting the error.

The following tables lists the errors that UPS may return in response to a request.

## Currency Codes

UPS currency code abbreviations generally follow the recommendations of the International Standards Organization (ISO), which publishes a list of currency abbreviations in ISO Standard 4217. The following table lists the currency codes defined by ISO at the time of this publication. The latest information is available from the ISO web site: <http://www.iso.org/>.

Countries may sometimes change their official currency. UPS does require time after the introduction of a new currency before it can fully support that currency. In addition, UPS may continue to support the older currency for an interim period in order to provide backwards compatibility.

UPS may also require the use of currencies other than the official currency for some countries.

Country/Region	Currency Name	Currency Code

## International Forms Preference Criteria

Preference criteria are required in North American Free Trade Agreement Certificate of Origin (NAFTA CO) documents. The following table lists the defined criteria and their use.

Criteria	Meaning
A	<p>The good is "wholly obtained or produced entirely" in the territory of one or more of the NAFTA countries as referenced in Article 415.</p> <p>Note: The purchase of a good in the territory does not necessarily render it "wholly obtained or produced." If the good is an agricultural good, see also criterion F and Annex 703.2. (Reference: Article 401(a) and 415)</p>
B	<p>The good is produced entirely in the territory of one or more of the NAFTA countries and satisfies the specific rule of origin, set out in Annex 401 that applies to its tariff classification. The rule may include a tariff classification change, regional value-content requirement, or a combination there-of.</p> <p>The good must also satisfy all other applicable requirements of Chapter Four. If the good is an agricultural good, see also criterion F and Annex 703.2. (Reference: Article 401(b))</p>
C	<p>The good is produced entirely in the territory of one or more of the NAFTA countries exclusively from originating materials. Under this criterion, one or more of the materials may not fall within the definition of "wholly produced or obtained," as set out in Article 415.</p> <p>All materials used in the production of the good must qualify as "originating" by meeting the rules of Article 401(a) through (d). If the good is an agricultural good, see also criterion F and Annex 703.2. Reference: Article 401(c).</p>
D	<p>Goods are produced in the territory of one or more of the NAFTA countries but do not meet the applicable rule of origin, set out in is an agricultural good, see also criterion F and Annex 703.2.</p> <p>Reference: Article 401(c). Annex 401, because certain non-originating materials do not undergo the required change in tariff classification. The goods do nonetheless meet the regional value-content requirement specified in Article 401 (d). This criterion is limited to the following two circumstances:</p> <ol style="list-style-type: none"> <li>1. The good was imported into the territory of a NAFTA country in an unassembled or disassembled form but was classified as an assembled good, pursuant to H.S. General Rule of Interpretation 2 (a). or (2).</li> <li>2. The good incorporated one or more non- originating materials, provided for as parts under the H.S., which could not undergo a change in tariff classification because the originating materials, provided for as parts under the H.S., which could not undergo a change in tariff classification because the heading provided for both the good and its parts and was not further subdivided into subheadings, or the subheading provided for both the good and its parts and was not further subdivided.</li> </ol> <p>Note: This criterion does not apply to Chapters 61 through 63 of the H.S. (Reference: Article 401(d))</p>
E	<p>Certain automatic data processing goods and their parts, specified in Annex 308.1, that do not originate in the territory are considered originating upon importation into the territory of a NAFTA country from the territory of another NAFTA country when the most-favored- nation tariff rate of the good conforms to the rate established in Annex 308.1 and is common to all NAFTA countries. (Reference: Annex 308.1)</p>
F	<p>The good is an originating agricultural good under preference criterion A, B, or C above and is not subject to a quantitative restriction in the importing NAFTA country because it is a "qualifying good" as defined in Annex 703.2, Section A or B (please specify).</p> <p>A good listed in Appendix 703.2B.7 is also exempt from quantitative restrictions and is eligible for NAFTA preferential tariff treatment if it meets the definition of "qualifying good" in Section A of Annex 703.2.</p> <p>Note: This criterion does not apply to goods that wholly originate in Canada or the United States and are imported into either country. Note: A tariff rate quota is not a quantitative restriction</p>
